Skills

Languages: C/C++, Bash **Technologies & Tools:** Docker, Terraform, Ansible, Git/GitHub, Nginx,

Cloud Platforms: AWS (EC2, Security Groups, IAM, S3)

Concepts: CI/CD Pipelines, Infrastructure as Code (IaC), Linux Administration, Monitoring & Observability, Automation & Scripting,

Operating Systems: Ubuntu Linux

Objective

Computer Science student interested in Cloud Computing and DevOps with hands-on experience in AWS, Linux, Docker, Terraform and Ansible. Passionate about infrastructure automation and scalable cloud systems

Work Experience

Cloud Computing Intern | Technlogs

Present

- Currently working as a Cloud Computing Intern, gaining hands-on experience with AWS and cloud infrastructure management
- Create and manage AWS IAM users, groups, roles, and permissions to implement secure access control
- Launch, configure, and maintain Amazon EC2 instances for application hosting and server administration
- Set up and manage Amazon Route 53 hosted zones and DNS records for domain routing and management
- Assist with cloud infrastructure deployment, basic networking, and Linux server administration
- Follow cloud security best practices while supporting day-to-day infrastructure operations
- Developed practical skills in AWS cloud services, server management, DNS configuration, and cloud security fundamentals through hands-on infrastructure management

Project Work

Pomodoro Timer – Containerized Cloud Deployment

- Designed and deployed a containerized application on AWS EC2 using Docker and Nginx
- Reduced deployment time from 30 minutes to under 10 minutes using reusable container workflows
- Improved environment consistency eliminating dependency mismatches across setups
- Used Nginx as a reverse proxy to simulate traffic handling and routing

Terraform AWS Infrastructure Provisioning (IaC)

- Built Infrastructure-as-Code templates to provision EC2 instances and configure Security Groups
- Reduced infrastructure setup time
- Created reusable Terraform modules to standardize deployments across multiple environments
- Automated provisioning workflows, eliminating repeated manual configuration steps

Ansible Configuration Management – Automated Server Provisioning

- Developed modular Ansible playbooks (base, SSH, Nginx, application deployment) for end-to-end server setup
- Reduced server configuration time
- Implemented security hardening (Fail2Ban, SSH key-based authentication) to improve system security

System Monitoring with Netdata (AWS)

- Deployed Netdata for real-time system monitoring on AWS EC2
- Tracked CPU, memory, disk, and network metrics with alert-based monitoring
- Reduced issue detection time through real-time observability dashboards
- Improved system reliability with proactive monitoring and faster troubleshooting

Static Website Deployment with Nginx + Automation

- Configured Nginx to host a static website on AWS EC2
- Automated deployment using Bash and rsync, reducing update time
- Improved deployment consistency and minimized human errors through script-based automation

Linux Systemd Service – Background Process Automation

- Created custom systemd services to manage background scripts and processes
- Reduced manual process handling via automated service management
- Implemented logging and monitoring using `journalctl`, improving debugging efficiency

Education

Toc H Institute of Science and Technology

B.E. in Computer Science and Engineering

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Advanced Data Structures and Algorithms

Certifications

- **LFS101: Introduction to Linux** – The Linux Foundation
 - Gained hands-on experience with Linux administration, Bash scripting, system configuration, file management, and Linux security.
- **Linux Unhatched** – Cisco
 - Developed practical skills in Linux command-line operations, file permissions, process management, regular expressions, and shell scripting.
- **Networking Basics** – Cisco
 - Learned networking fundamentals including IPv4 addressing, network types, protocols, wireless networking, and application layer services.

Achievements & Learning Experiences

- Solved 100+ problems on Codeforces, demonstrating strong problem-solving skills in Data Structures and Algorithms
- Attended Cyber Security Workshop at NIT Calicut
- Attended Cloud Computing Workshop at Toc H Institute of Science and Technology
